

Binks Super Efficiency SprayBooth Filter

The Two-Stage Filtration of this Binks High Efficiency Filter has the combined advantages of the Binks Standard filter with the added filtration of polyester backing.

For SprayBooths requiring greater filtration efficiency or two-stage filtration, the Binks High Efficiency Filter is the most economical choice on the market. The deeper V-shape of the back wall captures overspray and deposits it outside of the air flow in the paint holding pockets.

The position of the holes forces the air flow to change directions along three axes while the added layer of polyester captures the smallest particles.

Binks High Efficiency Filters last 4-6x longer than polyester, fiberglass, or mesh. Fewer filter changes means less disposal costs, less labour, and more production time due to fewer filter changes.

H90cm x W600cm (p/no 202279SEF)
